

Business Requirements Document (BRD)

Business Need

The organization requires a centralized and scalable wealth management platform to improve operational efficiency, advisor servicing, and client reporting.

Current Challenges

- Duplicate client records
- Manual reconciliation activities
- Delayed reporting
- Inconsistent portfolio valuation
- Compliance and audit concerns

Functional Requirements

1. The system should migrate client demographic data.
2. The system should migrate historical transaction records.
3. The system should support advisor-client mapping.
4. The system should support portfolio valuation reports.
5. The system should validate KYC data before migration.

Non-Functional Requirements

- Data encryption
- Audit trail tracking
- High availability
- Performance optimization
- Scalability

Regulatory Requirements

The migration process must comply with KYC, AML, GDPR, and internal data governance standards.
