

Data Validation Report

Validation Objective

Ensure migrated data matches source data and business requirements.

Validation Types

- Record count validation
- Field-level validation
- Business rule validation
- Portfolio balance validation

Validation Process

Source and target data compared using SQL queries and reconciliation reports.

Sample Validation

Source Client Count = 100000

Target Client Count = 100000

Status = PASS

Defect Management

Validation failures are logged in Jira and assigned to ETL developers for correction.
