

ETL Process Document

ETL Overview

ETL stands for Extract, Transform, and Load. It is the core process used for data migration.

Extract Phase

Data extracted from legacy CRM, portfolio systems, and transaction systems into staging tables.

Transform Phase

Business rules, cleansing logic, and transformation rules applied during staging.

Load Phase

Validated data loaded into target wealth management platform.

ETL Controls

- Error logging
- Reject handling
- Audit tracking
- Reprocessing mechanism

ETL Risks

ETL failure may result in incomplete migration or incorrect portfolio balances.
