

Project Charter

Project Background

ABC Wealth Management operates multiple legacy applications for managing client onboarding, portfolio management, transaction processing, and advisor servicing. Due to fragmented systems and manual reconciliation processes, the organization faces challenges related to duplicate client records, inconsistent reporting, and operational inefficiencies.

Business Objective

The primary objective of this project is to migrate all client and portfolio data from the legacy wealth management platform to a modern cloud-based advisory system with minimal downtime and zero critical data loss.

Project Scope

In Scope:

- Client Master Data
- KYC Records
- Portfolio Holdings
- Transaction History
- Advisor Information
- Risk Profile Data

Out of Scope:

- HR Systems
- Archived Historical Logs
- Vendor Master Data

Project Stakeholders

Sponsor: COO

Business Analyst: Requirement gathering and documentation

ETL Team: Data extraction and transformation

QA Team: Validation and testing

Operations Team: Business verification

Compliance Team: Regulatory validation

Success Criteria

- Successful migration of 100% active client records
- Less than 1% reconciliation variance
- Successful UAT signoff
- Zero compliance breaches
